## Program 9.

Create a knowledge base containing first order logic statements and prove the given query using resolution.

```
KB = {
  "food(Apple)": True,
  "food(vegetables)": True,
  "eats(Anil, Peanuts)": True,
  "alive(Anil)": True,
  "likes(John, X)": "food(X)", # Rule: John likes all food
  "food(X)": "eats(Y, X) and not killed(Y)", \# Rule: Anything eaten and not killed is food
  "eats(Harry, X)": "eats(Anil, X)", # Rule: Harry eats what Anil eats
  "alive(X)": "not killed(X)", # Rule: Alive implies not killed
  "not killed(X)": "alive(X)", # Rule: Not killed implies alive
}
# Function to evaluate if a predicate is true based on the KB

       return all(resolve(sub.strip()) for sub in sub preds)
     elif " or " in rule: # Handle disjunction

```

       return not resolve(sub pred.strip())
